

A utility seeking to retire or remove power generation from its portfolio as part of any proceeding before the IURC based wholly, or in part, on a governmental requirement, as defined in 8-1-1-16, must present to the IURC as part of its Application, the State Implementation Plan, or equivalent document from the Indiana Department of Environmental Management, or equivalent Indiana or U.S. Government agency, requiring such action. A governmental requirement shall not be considered final or enforceable if formal reconsideration of the rule upon which it is based, or any compliance deadlines associated with it, have been announced by the appropriate governmental agency.
